Preface

1. Customer & TESS Definition

TESS Innovation Sdn Bhd is hereinafter referred as “TESS” of the other part in this document.

2. Document Confidentiality

This document contains information that is proprietary to TESS and The Customer. This document, or any part thereof, shall not be copied, reproduced, translated or reduced to any electronic medium or machine-readable form or disclosed to any third party without the prior written consent or authorization of TESS and the Customer.

3. Purpose of Document

The purpose of this document is to clearly guide user to perform day by day operation.

4. Intended Audience

- Project team from TESS
- Project team from The Customer

5. Document Control

This document is subject to change control. All changes to this document shall be documented and distributed as “Release Version”. It will consist of the following: -

- Full replacement of the document; or
- Full replacement of a section in the document; or
- An addendum to the document.

Each revision will be assigned with a unique “Release Version” number and date. All pages distributed within a Document Release Notice will have the appropriate Release Version and Release Date indicated.

6. Screenshots

All sample screens as attached are for the reader’s viewing purpose only. The actual screen displayed in the [ISE M.ai](#) system shall be based on the specification of The Customer’s as agreed upon.

7. Disclaimer

- All advice given or recommendations made in this document are made in good faith on the basis of the information provided and otherwise generally available or known to TESS at the time of writing.
- No advice given or statements or recommendations made shall be in any circumstances constitute or be deemed to constitute warranty by TESS as to the accuracy of such advice, statement and recommendations.
- Subject to the contents of the Supply of Software, Licensing and Service Agreement executed, TESS shall not be liable for any loss, expense, damage or claim arising out of the advice given or not given or statements made or omitted to be made in connection with this document.
- ****This document is subject to updates.** Please note that it may be revised periodically within the same version to reflect any changes.

8. Product Version

This document is based on product version 1.3. Any other product version may not be relevant to this specific document content and its information.

9. Abbreviation & Definitions

Require Approval:

1. Allow to configure whether the risk maintenance requires approval.
2. Default the radio switches to **"Off"** if it does not require any approval.
3. If radio switches is turned **"On"**, it requires to set the number of approval "**__level(s)**" for each risk level. The list of risk level is automatically populate based on the risk assessment setting.
4. A maximum of 5 level approval can be set.
 - a. ODD Red Flags
 - b. EDD Forms

2.1.2 General □ Risk Overriding

Risk Overriding

Supersede Type

Manual Risk

Figure 2.1 Risk Overriding

1. Allow to configure which type of risk will supersede and override one another.
 - a) Manual Risk
 - b) Higher Risk

2. The **Manual Risk** will supersede the system risk level regardless what of kind they system risk level generated.
3. The **Higher Risk** will supersede either the manual risk or system risk.
4. The overriding risk features will affect on the following:
 - a) ODD red flags
 - b) EDD forms

2.2 Client Profile □ Case Template

The case template consists of two section configuration which is the primary configuration and the secondary detail configuration.

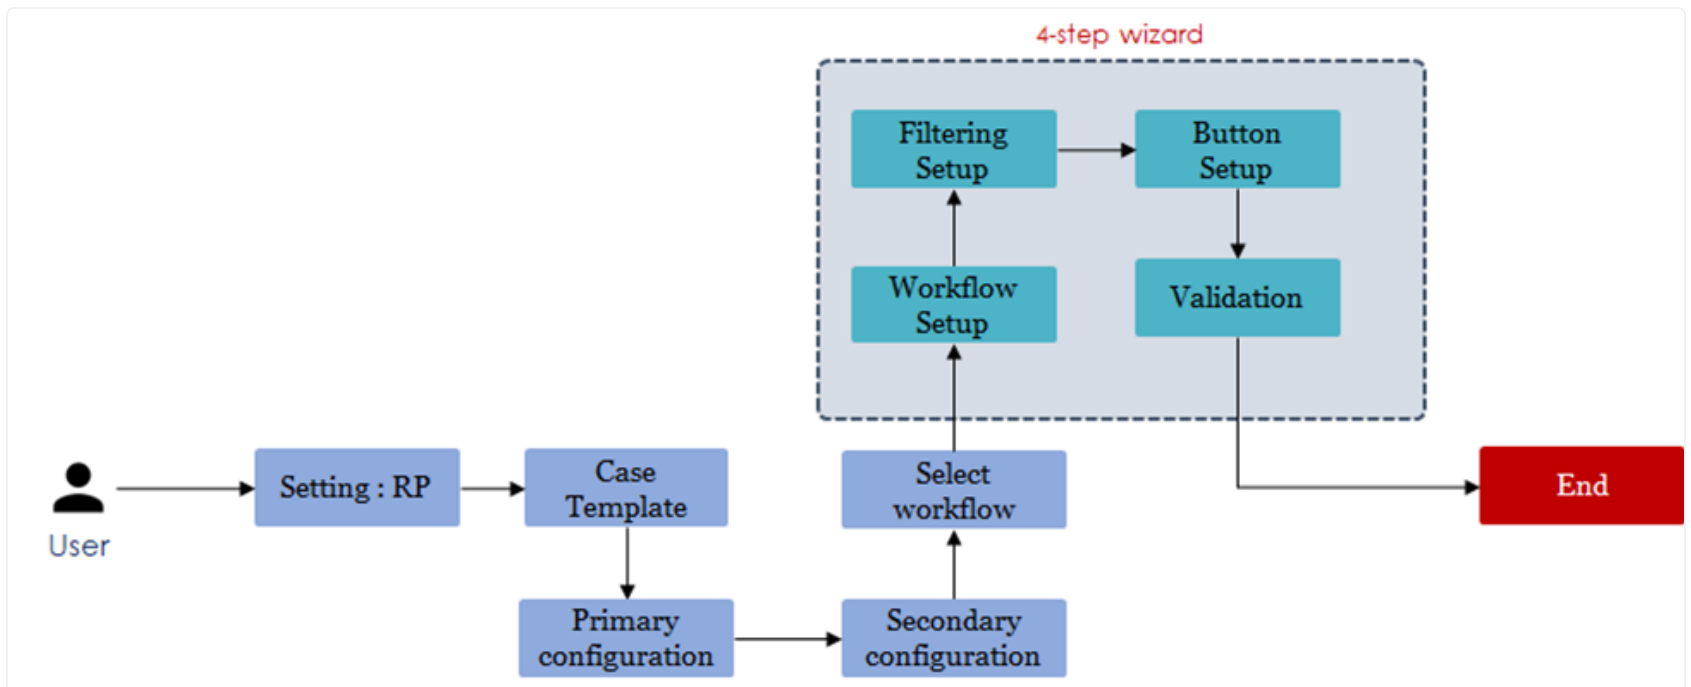

Figure 2.2: Case Template

2.2.1 Case Template □ Template Setting

The primary configuration allows users to create the case template that will group up the workflow that will be in the case template.

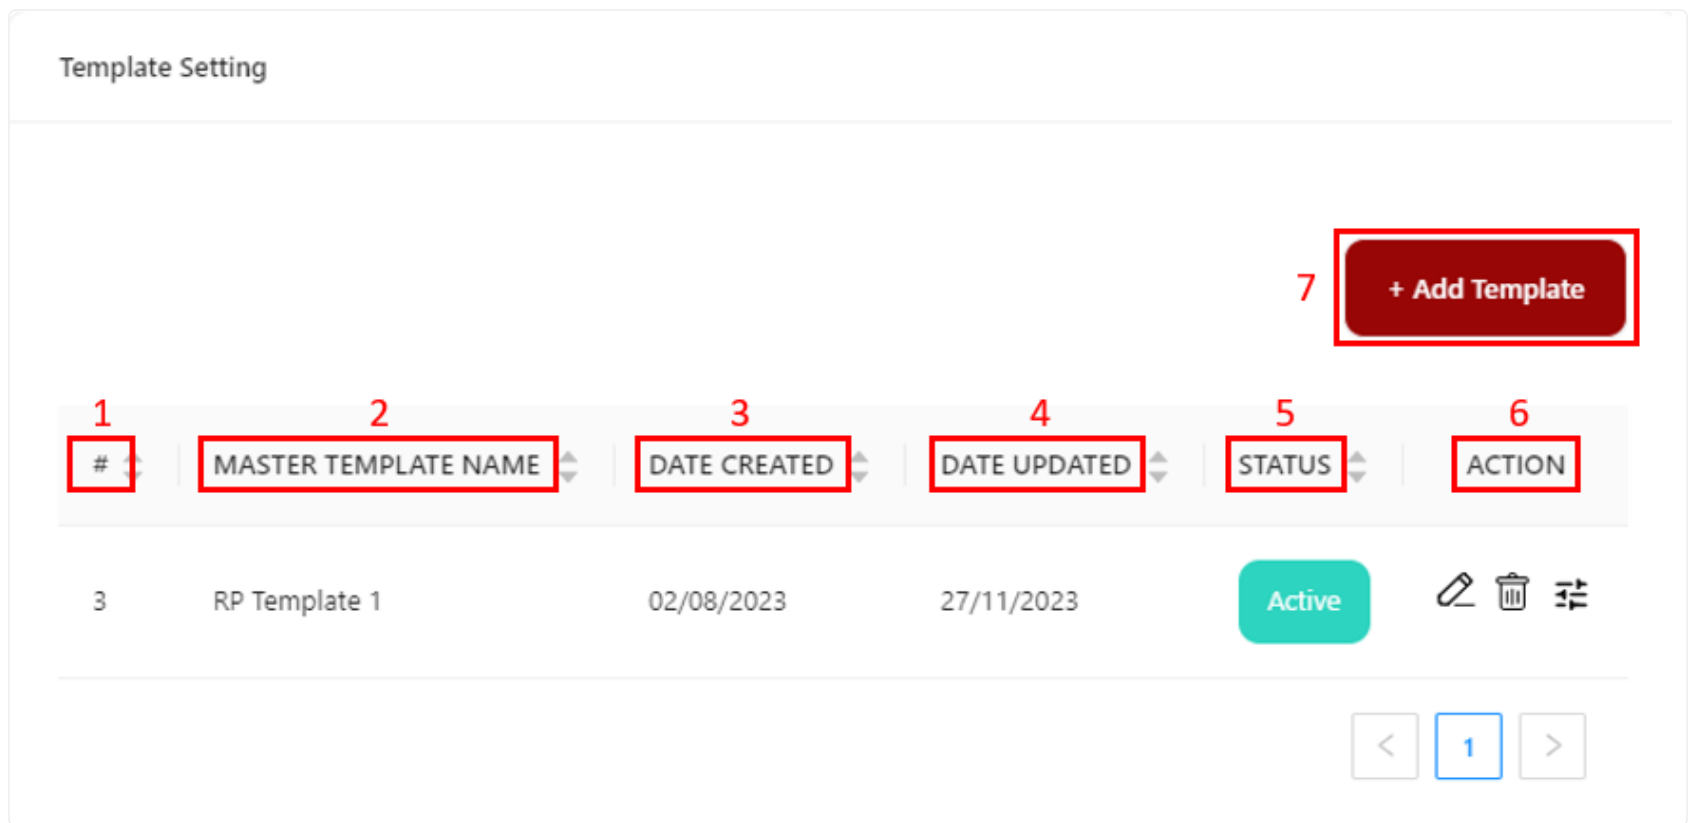

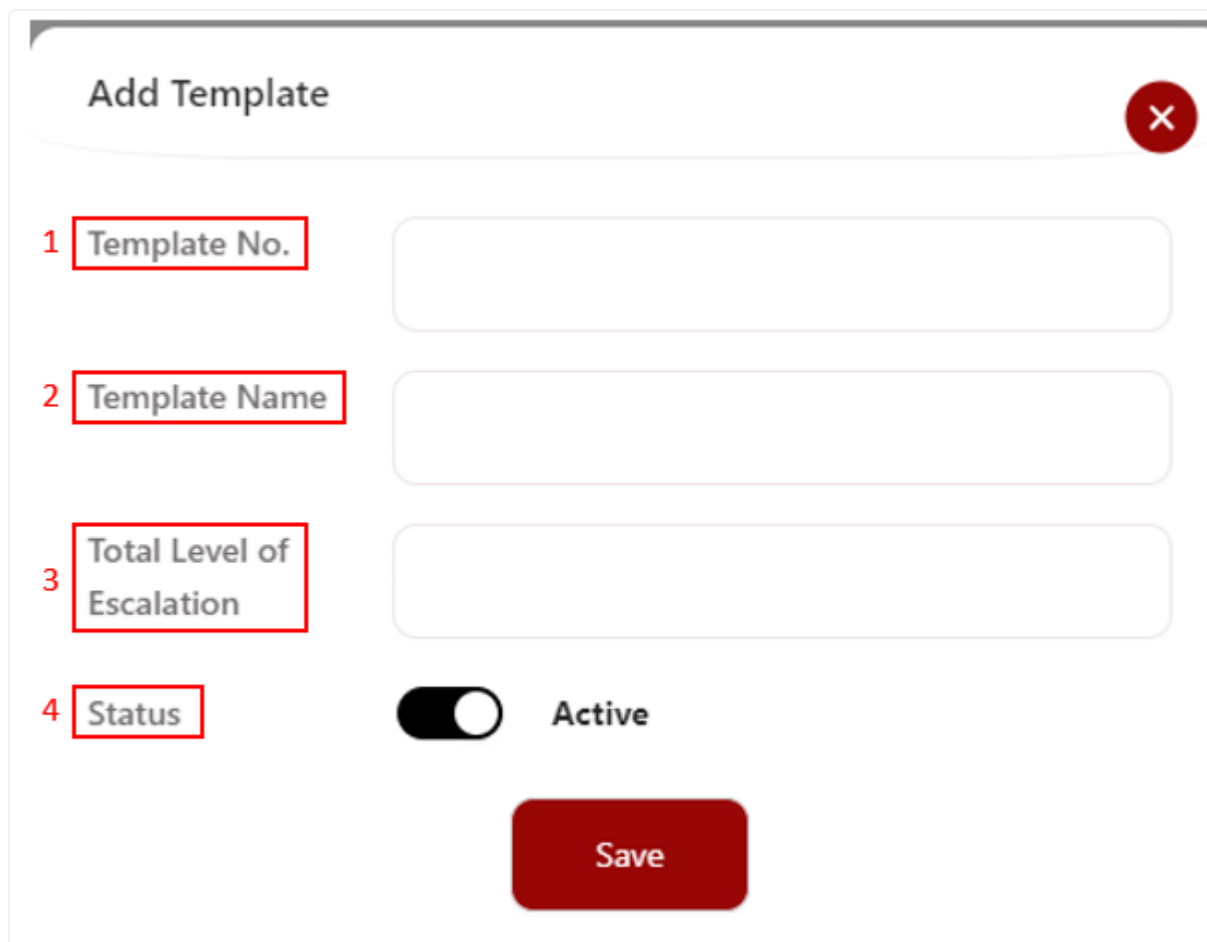

Figure 2.3: Template Setting

The information displayed is in the table below:

#	Name	Description
1	Master Template No.	Display the master template number.
2	Master Template Name	Display the master template name.
3	Date Created	Display the date that this configuration is created by the user.
4	Date Updated	Display the date that this configuration is updated by the user.
5	Status	Display whether this configuration is active or inactive.
6	Action	1. Update: Allow to perform update on the primary configuration. 2. Delete: Allow to delete the master template. 3. More Setting: Allow to configure the secondary detail configuration.
7	+ Add Template	Allow users to add new case templates.

2.2.2 Template Setting □ Add new Master Template

Users click "+Add template" button to add a new master case template. The system will show the "Add Template" pop up screen, as shown in the figure below.

The image shows a web form titled "Add Template" with a red close button in the top right corner. The form contains four numbered input fields: 1. "Template No." (text input), 2. "Template Name" (text input), 3. "Total Level of Escalation" (text input), and 4. "Status" (toggle switch). The toggle switch is currently in the "Active" position. Below the fields is a red "Save" button.

Add Template

1 **Template No.**

2 **Template Name**

3 **Total Level of Escalation**

4 **Status** ☒ **Active**

Save

Figure 2.3: Add Template

The information displayed is in the table below:

#	Name	Description
1	Template No.	Allow to input the master template no.
2	Template Name	Allow to input the master template name.
3	Total Level of Escalation	Allow to input the total level escalation. Maximum of 10 level escalation.
4	Status	Allow to select whether this configuration is active or inactive.

1. When adding a new template, the template will automatically create total workflow level based by the total level of escalation.
2. The same "Edit" button will allow to perform the following input above except not able to change the master template number.
3. When updating the total level of escalation to a smaller number comparing first created, the workflow level will not be reduced and deleted. User needs to delete manually*.
4. The **"More Setting"** button will allow to perform the necessary configuration for secondary detail configuration.

Steps on How to Edit Master Template

1. Click (a) "Edit" button under Action tab.

Template Setting

+ Add Template

#	MASTER TEMPLATE NAME	DATE CREATED	DATE UPDATED	STATUS	ACTION
4	WM Test	21-Aug-2024	21-Aug-2024	Inactive	a
11	QAD WM Workflow (3 Level)	15-May-2024	15-May-2024	Active	

2. A pop up screen will appear. User can update all necessary information like Name, Total Level of Escalation and Status. Click "Save" button when has completed update the master template.

Save

**** Note:** The workflow level must match with the Total Level of Escalation. If there is a mismatch, the system will display a prompt message (b) as refer figure below. In such cases, users must add a new level (c) and follow the steps provided **as referred to section 2.2.3** to include a new a workflow level.

1	Workflow Level	Display the workflow escalation level.
2	Workflow Name	Display the workflow name.
3	Date Created	Display the date that this configuration is created by the user.
4	Date Updated	Display the date that this configuration is updated by the user.
5	Status	Display whether this configuration is active or inactive.
6	Action	1. Update: Allow to perform update on the primary configuration. 2. Delete: Allow to delete the workflow.

2.2.3 Template Setting ▯ 4-Step Wizard

The action button will display a 4-step wizard configuration and each of the wizard step has its own configuration.

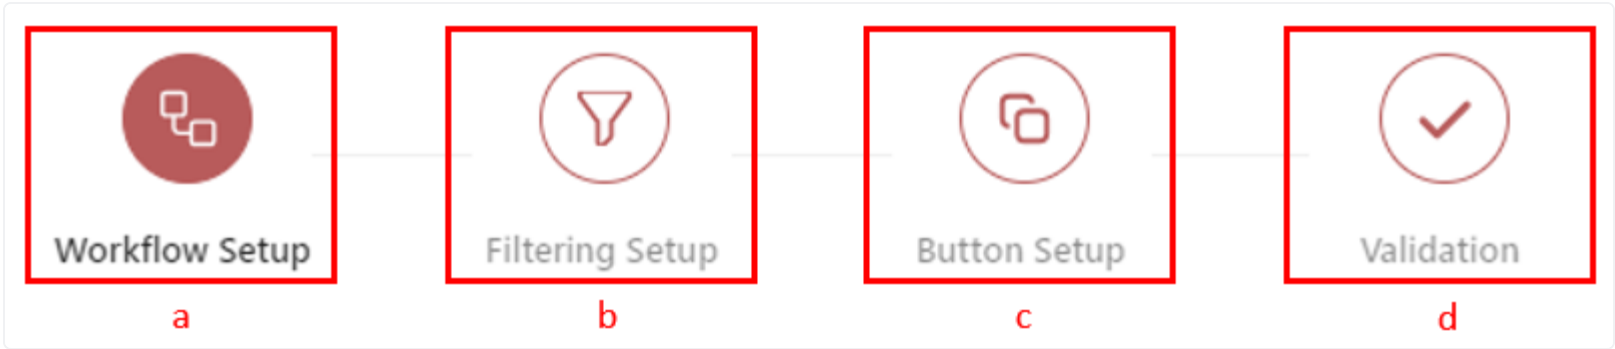

Figure 2.6: 4-Step Wizard

3	Status	Allow to select whether this configuration is active or inactive.

• Escalation Setup

Escalation Setup

☐ Allow to pick up case at any level

☒ Allow to reassign case

☒ Allow to rework case

☐ Allow to bypass case

Figure 2.8: Step 1 - Escalation Setup

The information displayed is in the table below:

#	Name	Description
1	Allow to pick up case at any level	Allow higher level workflow to pick up case at the lower-level workflow.

2	Allow to reassign case	Allow the case to reassign to another user.
3	Allow to rework case	Allow the case to rework to user.
4	Allow to bypass case	1. Allow the case to be bypass from one level to another level without following the case workflow level sequence. 2. This feature can only tun on if total escalation of workflow is more than 2 level.

● **Case Setup**

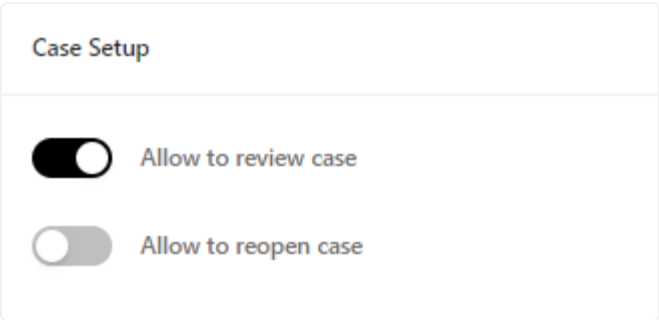

Figure 2.9: Case Setup

The information displayed is in the table below:

#	Name	Description
1	Allow to review case	1. Allow the case to be reviewed after case is closed. 2. Allow to select which sub status for review case.
2	Allow to reopen case	1. Allow the case to be reopened after the case is closed. 2. Allow to select which sub status for review case.

● **Draft Report Setup**

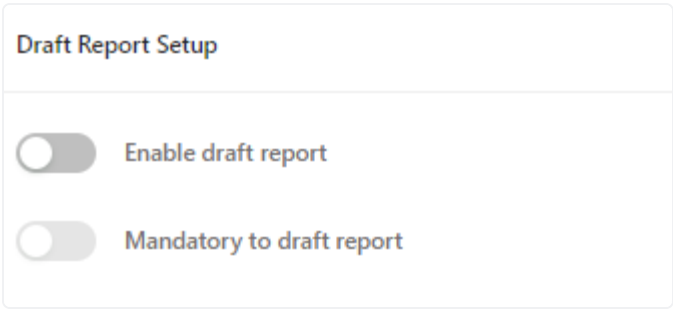

Figure 2.10: Step 1 - Draft Report Setup

The information displayed is in the table below:

#	Name	Description
1	Enable draft report	Allow activate or deactivate the enable draft report button Current workflow level can draft CTR & STR reporting.
2	Mandatory to draft report	- Allow to configure whether draft report is required. - If enabled, STR report is mandatory to be drafter before button submission. - If disabled, STR report is not mandatory to be drafted before button submission. - Mandatory to draft report radio switch can only be configured if the button is enabled.

• Others

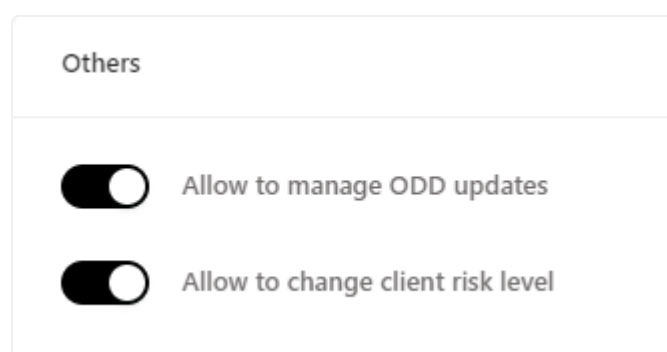

Figure 2.11: Step 1 - Others

The information displayed is in the table below:

#	Name	Description
1	Allow to manage ODD updates	Allow to perform updates on the ODD details.
2	Allow to change client risk level	Allow to modify client risk level manually during ODD workflow.

(b) Step 2: Filtering Setup

• Disable Filtering

To configure what kind of client case that the user can view and investigate.

1	Parameter Key	Display the sub parameter key.
2	Description	Display the parameter description.
3	Risk Score	Display the risk score for the particular parameter.
4	Date Created	Display the date that this configuration is created by the user.
5	Date Updated	Display the date that this configuration is updated by the user.
6	Status	Allow user to select whether this configuration is active or inactive.

7	Action	Update: Allow to perform update on the risk factor parameter list. Delete: Allow to delete parameter.
8	+ Add Parameter	Allow to add new case parameter in parameter list.

Steps on How to Add / Update Parameter

1. Click (a) "+Add Parameter" or (b) "Edit" button to update case parameter.

Manage Risk Parameter - Residency

(a)

+ Add Parameter

Parameter Key	Description	Risk Score	Date Created	Date Updated	Status	Action
0	Non Resident	25	21-May-2024	24-Jan-2025	Active	(b)
1	Resident	0	21-May-2024	21-May-2024	Active	
2	Not Available / NULL	25	21-May-2024	24-Jan-2025	Active	

2. The system will pop up screen to Add / Update case parameter.

Next

Figure 2.32: Risk Score Setup

The information displayed is in the table below:

#	Name	Description
1	Update Risk Score Range	Auto Calculation Score 1. Allow automatic calculation of system risk score for each risk level 2. Scores will auto-populate the "Risk Score Range" table

		3. Scores will be calculated using the following formula: $\text{Scale for each Risk Level} = \frac{(\text{Max Score} - \text{Min Score}) + 1}{\text{No. of Risk Level}}$ 4. System will pop up screen to confirm if User want to auto update Custom Calculated score to be same as System Calculated score when click the button.
2	Risk Level	Display the risk level.
3	Risk Description	1. Display the risk level description. 2. Display based by the total no. of risk level set up.
4	System Calculated	Min. Score: 1. Display the system minimum risk score. 2. Value automatically appear when click "Auto Calculate Score". Max. Score: 1. Display the system maximum risk score. 2. Value automatically appear when click "Auto Calculate Score".
5	Custom Calculated	1. Display based on the total no. of risk level configuration 2. Custom risk score will supersede system risk score Min. Score: 1. Display the system minimum risk score. 2. Allow to input the value score. Max. Score: 1. Display the system maximum risk score. 2. Allow to input the value score.
6	Update Custom Calculated Score	To allow update custom risk score for each risk level

5	Update Final Risk Score List	1. Allow update of score list in the risk assessment parameter based on Risk Score Range configuration 2. Display the final score will be updated to which parameter code. 3. An update button allowing the risk score list to be refreshed.
---	------------------------------	--

1. The system calculated fields and “Auto Calculate Score” button will only appear if select risk assessment - Permutation.
2. The custom calculated fields and “Update Custom Score” button will only appear if select risk assessment – Manual Calculation.

(d) Step 4: Risk Calculation Setup

To configure how the risk factor will be calculated individually and where to get the risk factor source data and destination.

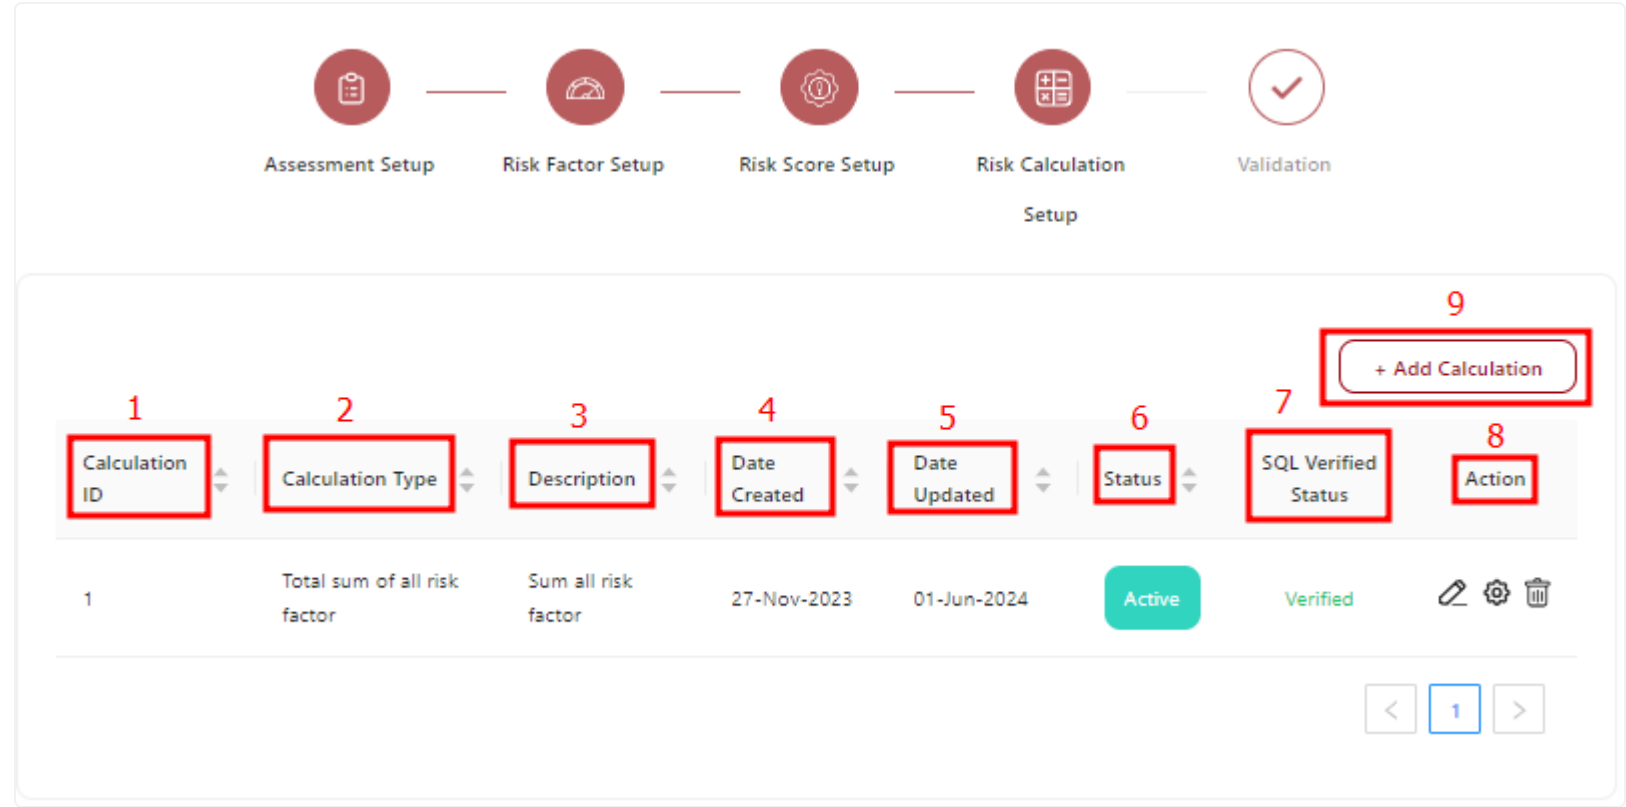

Figure 2.33: Risk Calculation Setup

The information displayed is in the table below:

#	Name	Description
1	Calculation ID	Display the risk calculation ID.
2	Calculation Type	1. Allow to select the calculation type: a. Total sum of all risk factor

		b. Add max value c. Add score value d. Add transaction score 2. Display disclaimers note: Please configure each risk factor calculation using "More" actions.
3	Description	Display the risk calculation description.
4	Date Created	Display the date that this configuration is created by the user.
5	Date Updated	Display the date that this configuration is updated by the user.
6	Status	Display whether this configuration is active or inactive.
7	SQL Verified Status	1. Display whether this SQL verified status is pending or verified. 2. Default to Verify when add new condition or when update the condition. 3. Allow to click "Verify" button to verify the condition. Change status to "Verified" after clicking.
8	Action	1. Update: Allow to perform update on the risk calculation setup. 2. More Setting: Allow to add or update the risk factor source and destination based by the calculation type. 3. Delete: Allow to delete risk calculations
9	+Add Calculation	Add new Risk Calculation Setup

Figure 2.34: Risk Calculation Setup

The information displayed is in the table below:

#	Name	Description
1	Calculation ID	1. Allow to input the calculation ID when add new calculation. 2. Does not allow to input the calculation ID when update calculation.
2	Calculation Type	1. Allow to select the calculation type: a. Total sum of all risk factor b. Add max value c. Add score value d. Add transaction score 2. Display disclaimer note: Please configure each risk factor calculation using "More" actions.
3	Calculation Description	Allow to input the calculation description.

4	Status	Allow to select whether this configuration is active or inactive.
5	Filtering Setup	Allow user to either " Disable Filtering " or " Enable Filtering ". • If Disable, no filtering is require and allow to view all client portfolio • If enable, filtering is require and allow to view specific client portfolio

- Filtering Setup

The screenshot shows the 'Conditions' section of the Filtering Setup interface. It includes a header 'Conditions' and a sub-header 'Meet ALL of the following condition:'. Below this, there are two rows of dropdown menus for configuring conditions. The first row is pre-filled with 'Client' (labeled 1), 'Entity Type' (labeled 3), 'Equal to' (labeled 5), '2' (labeled 6), and an empty operator dropdown (labeled 7). The second row contains 'Please select' placeholders for the first three dropdowns and an empty operator dropdown. A '+ Add Condition' button (labeled 8) is located below the first row. At the bottom, there are 'Cancel' and 'Save' buttons.

Figure 2.35: Filtering Setup

The information displayed is in the table below:

#	Name	Description
1 & 2	+Add Condition	1. Allow to add or remove additional condition. 2. Adding condition will allow to choose to combine the condition either AND/OR.
3	Table	Allow to choose which database schema/table that the data resides.
4	Field	Allow to choose which field that the data resides on the table.
5	Formula	Allow to choose which formula to use on the filtering.
6	Filtering Input	Allow to input what is the filtering data. The input type depends on the field selected: 1. CIF 2. Account 3. STR
7	Operator	Allow to choose to combine filtering using "AND" or "OR" condition, only exist when there is more than 1 condition

8	+Add Condition	Allow to add additional filtering
---	----------------	-----------------------------------
