Preface

1. Customer & TESS Definition

TESS Innovation Sdn Bhd is hereinafter referred as “TESS” of the other part in this document.

2. Document Confidentiality

This document contains information that is proprietary to TESS and The Customer. This document, or any part thereof, shall not be copied, reproduced, translated or reduced to any electronic medium or machine readable form or disclosed to any third party without the prior written consent or authorization of TESS and the Customer.

3. Purpose of Document

The purpose of this document is to clearly guide user to perform day by day operation

4. Intended Audience

- Project team from TESS
- Project team from The Customer

5. Document Control

This document is subject to change control. All changes to this document shall be documented and distributed as “Release Version”. It will consist of the following:-

- Full replacement of the document; or
- Full replacement of a section in the document; or
- An addendum to the document.

Each revision will be assigned with a unique “Release Version” number and date. All pages distributed within a Document Release Notice will have the appropriate Release Version and Release Date indicated.

6. Screenshots

All sample screenshots as attached are for the reader’s viewing purpose only. The actual screen displayed in the [iSEM.ai](#) system shall be based on the specification of The Customer’s as agreed upon.

7. Disclaimer

- All advice given or recommendations made in this document are made in good faith on the basis of the information provided and otherwise generally available or known to TESS at the time of writing.
- No advice given or statements or recommendations made shall be in any circumstances constitute or be deemed to constitute warranty by TESS as to the accuracy of such advices, statement and recommendations.
- Subject to the contents of the Supply of Software, Licensing and Service Agreement executed, TESS shall not be liable for any loss, expense, damage or claim arising out of the advice given or not given or statements made or omitted to be made in connection with this document.
- **This document is **subject to updates**. Please note that it may be revised periodically within the same version to reflect any changes.

8. Product Version

This document is based on product version 1.3. Any other product version may not be relevant to this specific document content and its information.

Overview of Onboard Screening

1. About Onboard □ Onboard Screening

Anti-Money Laundering (AML) onboarding screening is a critical process for financial institutions and other regulated entities to assess and mitigate the risk of money laundering activities. AML regulations require

businesses to perform due diligence on customers to ensure they are not involved in money laundering or other financial crimes. The configuration for each watchlist provider will vary, utilizing distinct sets of filtering criteria for screening purposes. This diversity is contingent upon the data availability provided by the respective watchlist provider.

1.1 Apps Process Flow to Manage Onboard Screening

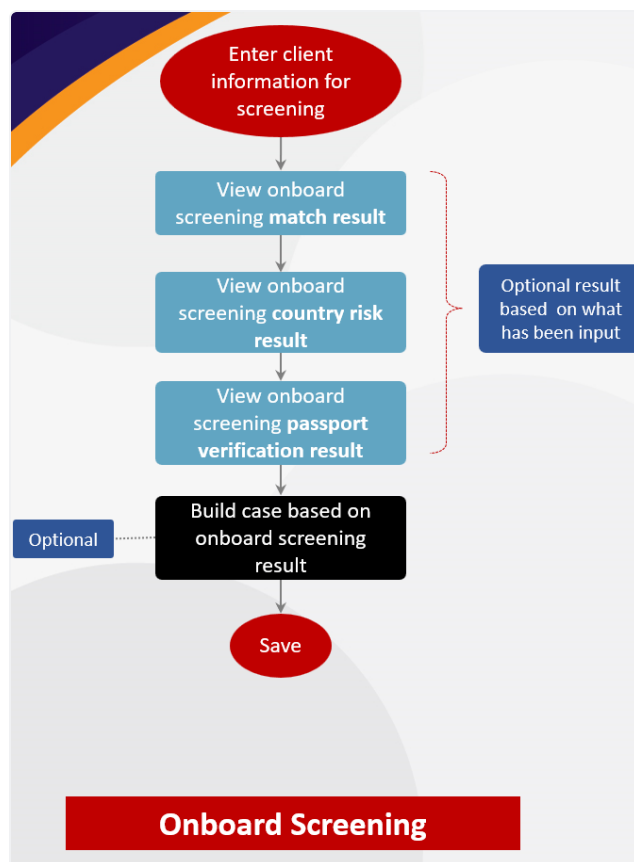

Figure 1.0: Apps Process Flow to Manage Onboard Screening

The figure above describes the app's process flow to manage Onboard screening.

1. The client's information is input into the application's system for screening.
2. There are optional results based on what has been input:
 - a. Match Result
 - b. Country Risk Result
 - c. Passport Verification Result

2. Onboard Screening

2.1 Onboard Screening □ Client Information

2.1.1 How to Perform Adhoc Onboard Screening?

This page consists of three parts which include the general information about the client, category filter, and additional client information.

Steps to Perform Adhoc Onboard Screening:

1. When a customer necessitates Onboard screening, the user initiates the process by entering the customer's general information for screening.

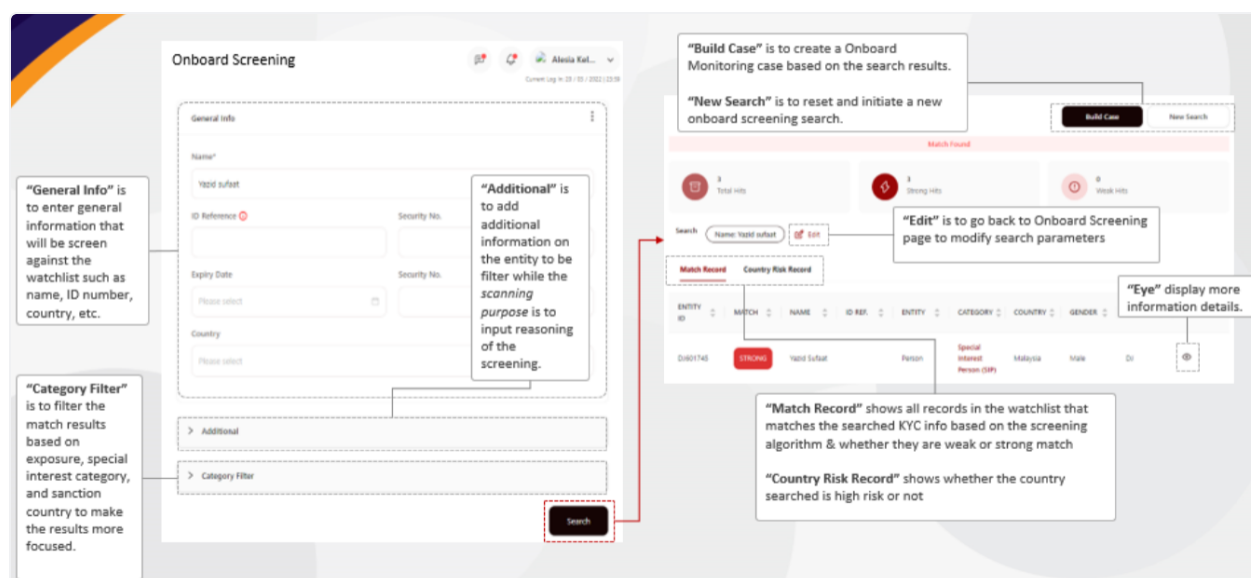

Figure 2.0: How to Perform Adhoc Onboard Screening

2. The user has the option to enter additional information for filtering, enhancing the screening result to reduce false positives and achieve a more precise outcome for further investigation.
3. Upon filling in all the required Onboard screening information, the user can proceed by pressing the search button to initiate the screening process against the data from Watchlist Providers and the internal watchlist.
4. In the event of Onboard screening hits, the system will display a summary indicating **Total Hits**, **Strong Hits**, and **Weak Hits**. Detailed information about the hits will be presented in a list below the summary. Users can then investigate the details of the hits for further examination.
5. If the user identifies suspicious hits requiring escalation, they can create a case using the "**Build Case**" button located at the top right of the screen. The information will then be accessible in the onboard case workflow, facilitating further investigation and validation at the case level.
6. The user can click on the "**New Search**" button for the next Onboard Screening.

2.2 Client Information □ General Information

This section allows the users to modify general information.

Figure 2.1: Onboard Screening General Information

The information displayed is in the table below:

#	Name	Description
1	Name	Allow users to input individual or corporate names to check against the watchlist.
2	ID Reference	1. Allow users to input their ID (not limited to driver's license, passport, etc.) or corporate business registration number to check against the watchlist. 2. Allow users to input passport numbers to validate whether the passport is genuine or counterfeit. If the passport number does not follow the international standard, add a zero in front as an additional number for validation.
3	Security No.	Allow users to input the passport security number to validate passport is genuine or counterfeit.
4	Expiry Date	Allow the user to input the passport expiry date to validate passport is genuine or counterfeit.
5	Security No.	Allow users to input the passport security number to validate passport is genuine or counterfeit.
6	Country	1. Allow the user to select the country as part of the screening filtering.

		2. The country may also be used for sanction country/high-risk checking by enabling/disabling the function from “more settings” .
7	View Setting	The user can enable or disable client information to display the 'Match Record' based on options: • Allow passport Verification • Allow Country Risk Check • Allow Category Filter

2.3 Client Information □ Additional

This section is to add additional information on the entity.

The screenshot shows a form titled 'Additional' with a dropdown arrow. Below the title, there are six fields, each with a red number and a red box around the label:

- 1 Entity Type**: A dropdown menu with 'Please select' and a downward arrow.
- 2 Year of Birth**: A field with 'Please select' and a calendar icon.
- 3 Scan Purpose**: A dropdown menu with 'Please select' and a downward arrow.
- 4 Gender**: A dropdown menu with 'Please select' and a downward arrow.
- 5 Difference***: A dropdown menu with 'Please select' and a downward arrow.
- 6 Count***: A dropdown menu with 'Please select' and a downward arrow.

Figure 2.2: Onboard Screening Additional

The information displayed is in the table below:

#	Name	Description
1	Entity Type	Allow the user to select whether it is individual or corporate name filtering.
2	Year of Birth	Allow user to input year of birth for individual or date of incorporation for corporate.
3	Scan Purpose	Allow the user to input the reason for checking the individual or corporate name.

4	Gender	1. Allow the user to select the gender of the person. 2. Allow the user to select “Not applicable” for corporate.
5	Difference	A year range approximation consisting of: 1. A drop-down with the following options: • - : Include older results up to [Count] years from the specified year. • + : Include newer results up to [Count] years from the specified year. • - / + : Include both older and newer results up to [Count] years from the specified year.
6	Count	Integer input field. Allow the user to input an approximation value (in years).

2.4 Client Information □ Category Filter

This section is to filter the category list provided by watchlist provider.

Category Filter

Figure 2.4: Onboard Screening Search Results

The explanation of the information displayed is in the table below:

#	Name	Description
1	Match Result	The information to be display upon system providing the match result: Match Found: Input name is a match against the watchlist. Match Not Found: The input name is not a match against the watchlist. Counterfeit Passport: It is a possible counterfeit passport. Genuine Passport: The passport is genuine. Sanction Country Found: The input country is listed as a sanctioned country or high-risk country. Sanction Country Not Found: The input country is not listed in the sanctioned country or high-risk country.

2	Summary Cards	A total match record of how many total strong, and total weak records will be displayed.
3	Search Filter	A summary of search filters with an edit button next to them, to allow the user to modify current search filters and perform new searches.
4	Match Record	Match record details of the red flags match result hit against which watchlist record [refer to Table (4) Match Record below for further explanation].
5	Build Case button	Enable users to report and build cases based on the watchlist match result.
6	New Search button	Enable users to re-search for entirely new names & filters. (User will back to previous on Onboard Screening page)
7	Country Risk Record	Enable users to view details of the sanctioned country checking result, referring to Table (7) Country Risk Record for further explanation of the Country Risk Record.

□Table (4) **Match Record**: Details of the red flags match result will indicate which watchlist record triggered the match.:

#	Name	Description
1	Entity ID	Display the watchlist entity ID. The entity ID can come from various watchlist providers or self-generated for internal watchlist upload.
2	Match	Display the accuracy of the watchlist result (Strong/Weak).
3	Name	Display the watchlist individual/corporate name that hits against the client's name.
4	ID Reference	Display the watchlist individual/corporate (ID number, corporate registration number, etc.).
5	Entity Type	Display the watchlist individual/corporate type: • Individual. • Corporate/Non-individual.
6	Country	Display the watchlist individual/corporate nationality or country incorporated.
7	DOB	Display the date of birth for individual or creation date for corporate.
8	Category	Display the watchlist individual/corporate category. The category is subject to each various watchlist provider.
9	Actions (View)	Enable users to view watchlist details through a side panel display.

Table (7) **Country Risk Record:** Details of the sanctioned country checking result:

#	Name	Description
1	Country	Display the country data input from Onboard screening.
2	Result	Display the input data vs sanction country to check whether the country is under sanction or a high-risk country based on the watchlist maintenance – Country Risk.

2.6 Client Information - Build Case

2.6.1 How to Build Case Based on Onboard Screening Result?

This section outlines how users can Build Cases Based on Onboard Screening Results under Onboard.

Steps to Build a Case based on the Onboard Screening Result:

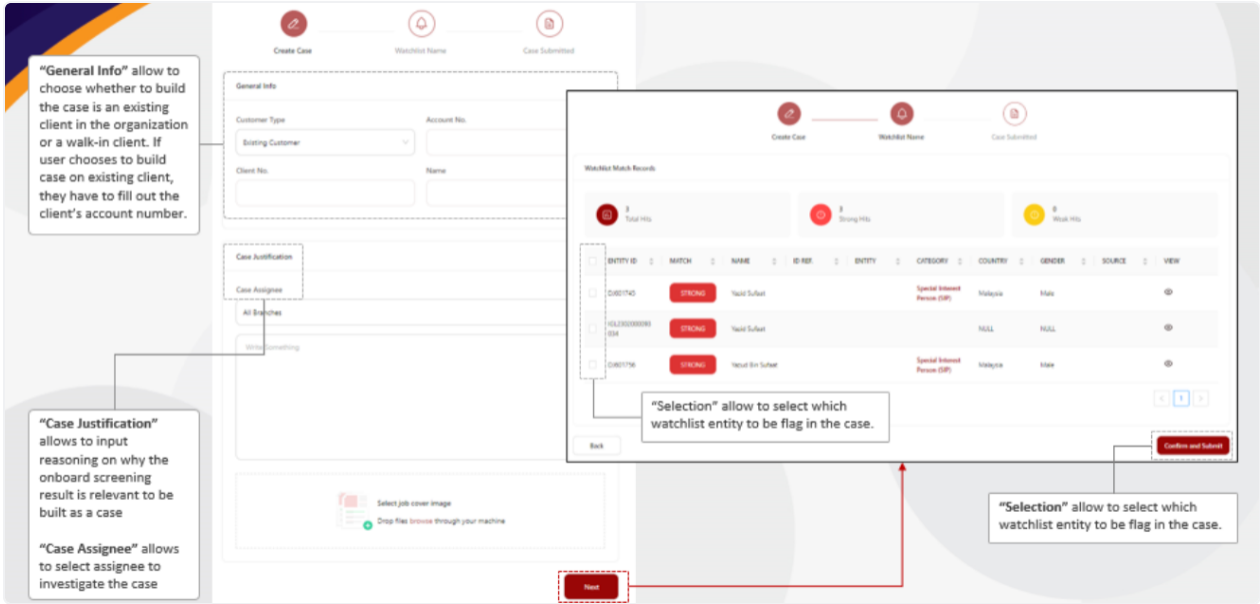

Figure 2.5: How to Build Case Based on Onboard Screening Result

1. In this section, users can build cases based on red flag results found during onboard screening.
2. In order to create a case, users must input all the relevant client information under general information (client type, account no, client no, and name).
3. Users need to add justification for creating cases (case assignee, justification or comment).
4. An upload attachment section is optional for users to include any relevant files to the case.
5. Once the users are done filling up information to build a case, click the **"Next"** button to view further information to complete building a case until it is submitted.

2.7 Build Case - 3-Step Wizard

The **"Build Case"** process will incorporate a 3-step wizard, involving the creation of a manual case. Each step in the wizard will have its own set of features.

Figure 2.6: Build Case 3-Step Wizard

(a) Create a Case

Step 1: Case Details

- To fill in the red flags information of the case that is going to be created. Client name information will be auto populate after click verify account no. (*Only applicable for existing client type*).
